

Single Supervised User

Kjetil Melheim

Platform team leader

The Norwegian Digitalisation Agency

Why

- Shared users
 - Keyvault, password-db, confluence, github, slack.
 - No one know who was using it
- Individual users:
 - No housekeeping, nobody cleans up when someone quit
 - More users to manage

Use organisations ID-system

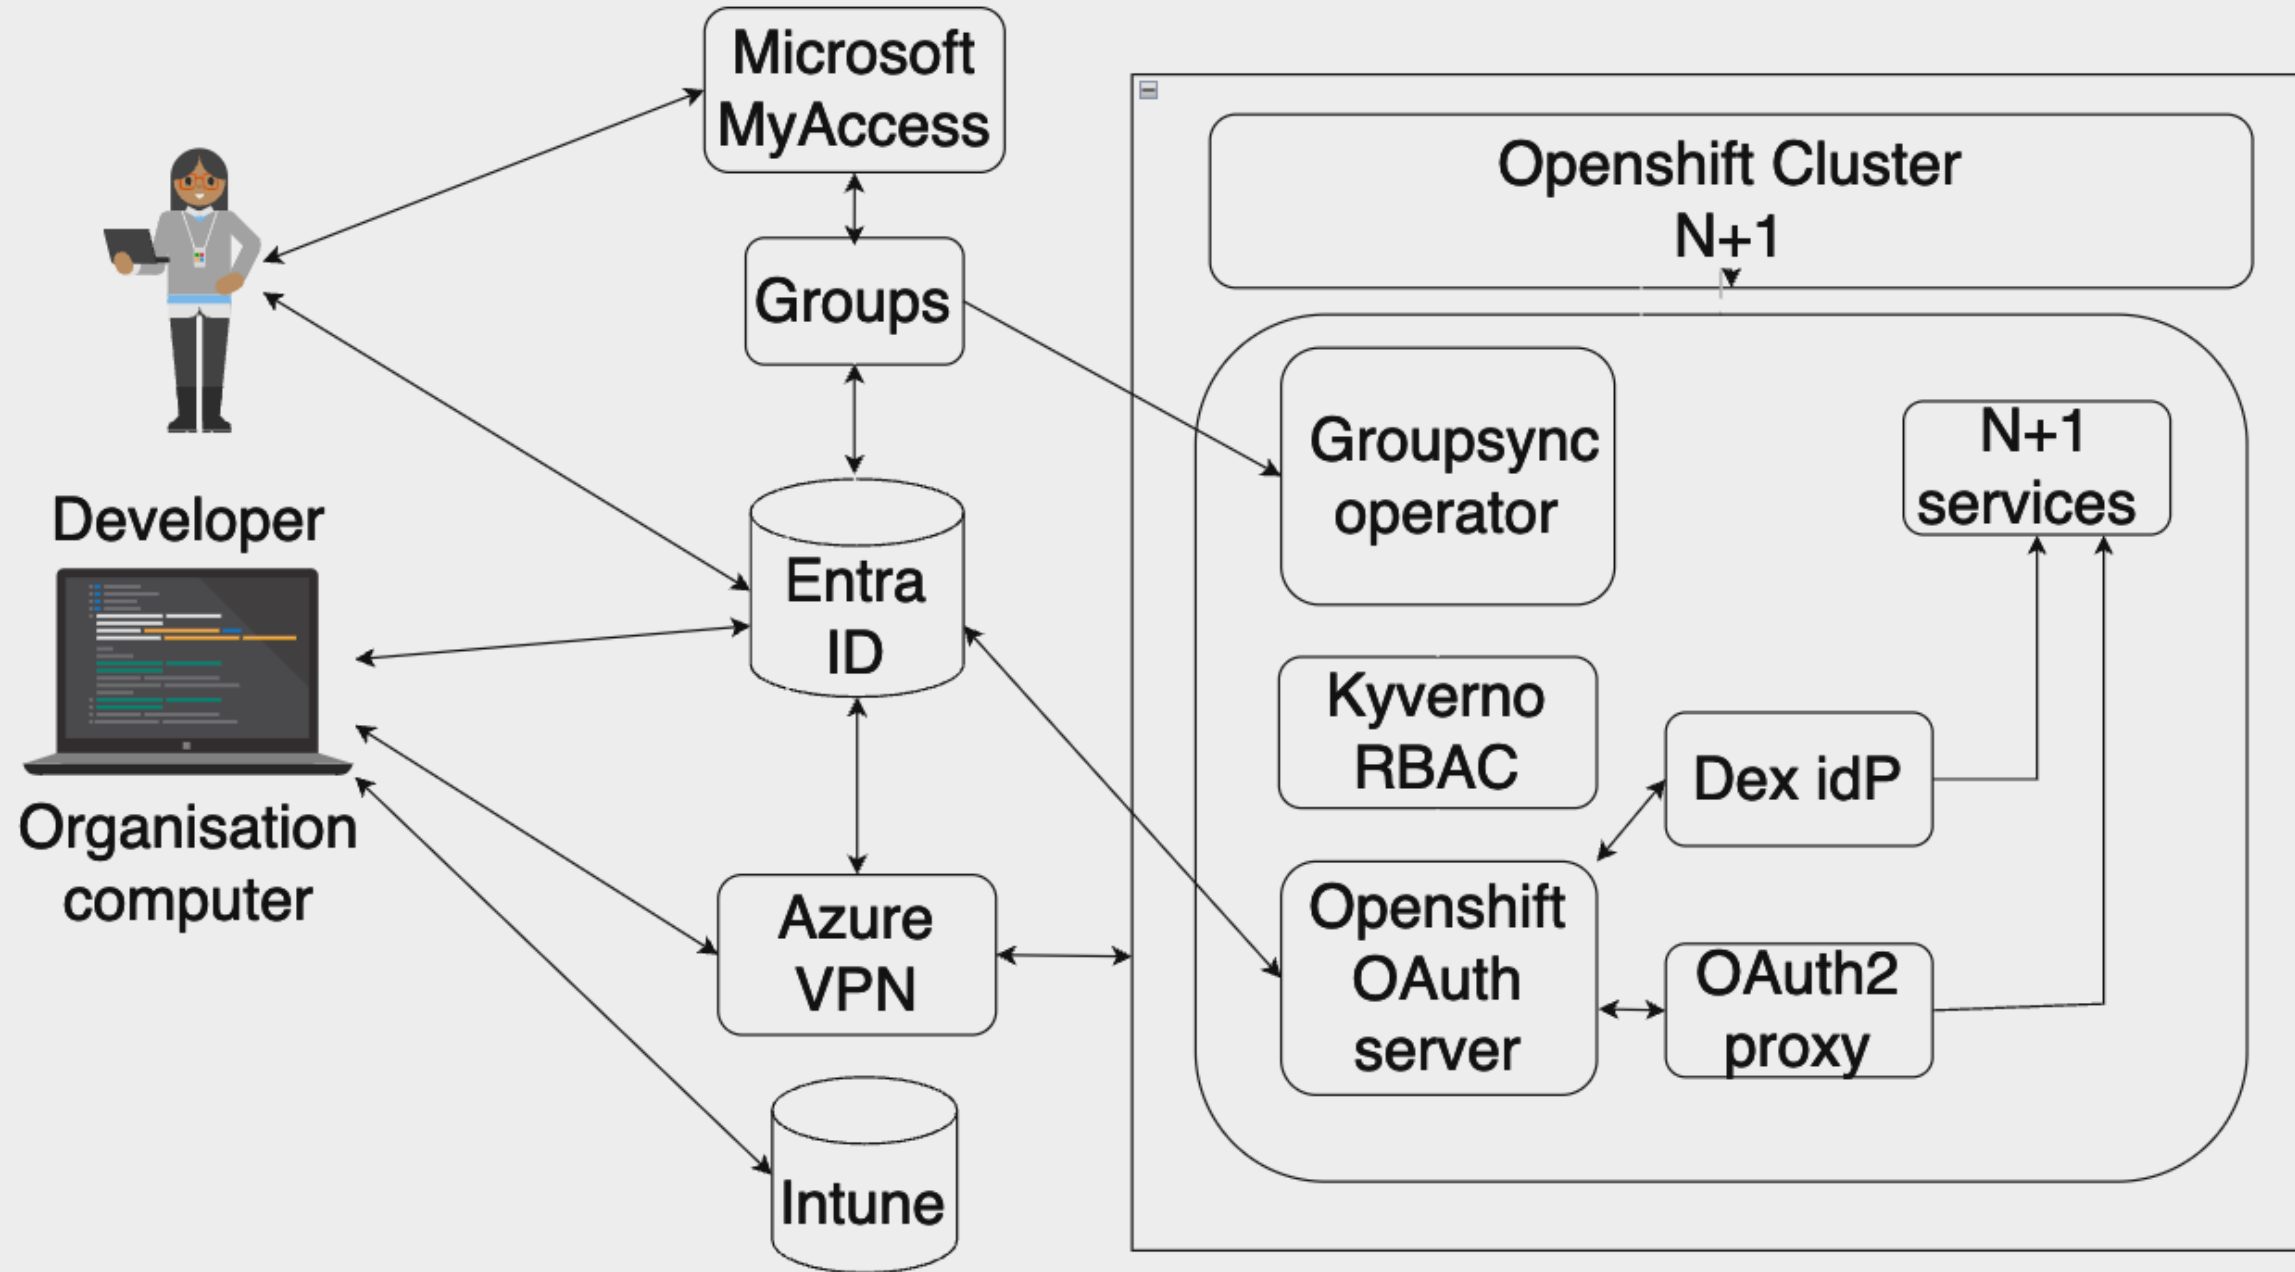

- Organisation takes care of the life-cycle of users
 - Housekeeping one place
- Conditional access
- Business policy for where
- MFA
- Fido for cluster-admin
- Logging, monitor and alerts
- Only known devices that is supervised by organisation

Roles and groups

- Teams are changing
- Temporary access is needed
- Time-limited group members
 - Developer on developer cluster, 3 months
 - Cluster-Admin in production cluster, 2 hours.
- Audit log on approval

VPN

- Why VPN
 - Loads of services which is not intended for the public anyway.
 - Time to patch Zero-days
 - We don't like to expose ourself unnesesery.
 - Public dashboard to the rest of organisation.
- One VPN
 - User friendly
 - Easy Access to multiple clusters and locations
